

Project Proposal

Film Efiko Editorial Website Redesign & Headless
Publishing

PREPARED EXCLUSIVELY FOR

Film Efiko

25 August 2026

Project Overview

Project direction

Film Efiko requires a new editorial website that presents its stories with a clear hierarchy, strong imagery and a consistent magazine-style reading experience.

The website will use The Nation's editorial structure as a reference for proportions, typography hierarchy, image ratios, spacing and homepage rhythm while applying Film Efiko's own identity and content requirements.

Technical direction

The public website will be custom-built with Next.js and deployed on Vercel. Film Efiko's present WordPress installation will remain the publishing end.

Gadar's EasyHeadless publishing solution will connect WordPress to the Next.js frontend. EasyHeadless is the Gadar blogging and headless publishing solution used for this project.

Design direction

AREA	APPROACH
Structure	The Nation's editorial hierarchy, image proportions, spacing and homepage rhythm will guide the layout.
Branding	Film Efiko's logo and brand assets will replace all reference branding.
Colour	White will be the main background and reading surface, black will be used for text, orange will replace the reference pink or red accent, and blue will be used as a secondary accent.
Content control	WordPress will control articles, images, categories, authors, issues and selected homepage positions.
Design control	Fonts, colours, spacing, image ratios, card styles, grids and responsive layouts will remain fixed in code.

Proposed Homepage Structure

THE NATION REFERENCE	FILM EFIKO SECTION	CONTENT BEHAVIOUR
Top Stories	Top Stories	Same four-story structure. Editors can choose the main hero; otherwise the newest suitable story appears automatically.
Latest	Hot-Hot	A fast-moving feed of recent or editor-selected stories.
Subscribe to Print Mag	Film Efiko Newsletter	Newsletter promotion and email subscription.
Nation Voices	Columns	Selected columnists and their recent or manually chosen articles.
Popular	Hot-Hot	Six most-read or manually selected stories.
From the Archive	Big Interview	A prominent selected interview with image, interviewee, introduction, author and link to the full article.
The Nation Weekly	From the Archive	An older Film Efiko story brought back into focus through manual selection, scheduling or an automatic fallback.

Working label note: two homepage sections are currently called Hot-Hot. They will be stored separately as Feed and Popular in WordPress; the final public labels can be confirmed during design approval.

Proposed Homepage Structure

THE NATION REFERENCE	FILM EFIKO SECTION	CONTENT BEHAVIOUR
Politics	Ideas	Three essays, opinions, columns or analysis articles, filled automatically with manual replacement available.
Books & the Arts	Reviews	Four review articles covering cinema, television, streaming or documentary.
New section	TV & Documentary	Four articles selected from TV and Documentary, with automatic category fallbacks.
World	Seasonal Spotlight	Three articles under a changeable title such as AMVCA, Oscars, Cannes, Sundance or FESPACO.
Features	The Cover	The current cover issue or selected cover story using a magazine-style image proportion and large feature dimensions.
New section	Features	A separate large-format section containing one prominent feature and supporting articles.
Newsletter and footer	Film Efiko newsletter and footer	Newsletter, navigation, social links, donation link and company information.

Automatic fallback

Curated positions will have category-based fallbacks. The homepage remains complete when editors do not manually select every story.

Design consistency

Image proportions, typography, spacing and colours are fixed in the frontend. WordPress controls what appears, not how the design is styled.

WordPress Content Management

What Film Efiko can manage

- Articles, drafts, scheduling and publication.
- Authors, columnists, photographs and biographies.
- Categories, tags and article types.
- Featured images, captions, credits and alternative text.
- Homepage hero and supporting stories.
- Hot-Hot, Big Interview and From the Archive selections.
- Ideas, Reviews, TV & Documentary and Features.
- Seasonal Spotlight title, dates and stories.
- Cover issues and related cover stories.
- Menus, footer content, newsletter wording and Donate link.

What remains fixed in code

- Fonts and font sizes.
- Colours and visual hierarchy.
- Image dimensions and aspect ratios.
- Homepage grid and section layouts.
- Spacing and card styles.
- Header and navigation structure.
- Mobile and tablet layouts.
- Animations and interface behaviour.

Automatic content fallback: empty homepage positions will be filled from the correct categories so the homepage remains complete when editors do not manually select every story.

Email Access, Newsletter and Donations

Email-gated articles

This is an email access gate, not a paid paywall. When publishing an article, the editor can choose whether it is public or email-gated.

- 1 The visitor sees the headline, image and opening portion.
- 2 The visitor enters an email address.
- 3 A short verification code is sent to the email address.
- 4 The visitor enters the code and the full article becomes available.
- 5 Access is remembered on that browser for an agreed period.

WordPress email list

Email addresses submitted through the article access gate will be stored in a dedicated area in WordPress. Authorised Film Efiko users will be able to view and retrieve the list for approved editorial or audience-management purposes.

Newsletter consent will remain separate. Verifying an email address to read an article will not automatically subscribe the reader to marketing messages.

Newsletter integration

The Next.js frontend can be connected to the newsletter platform selected by Film Efiko. The subscription form, confirmation messaging and destination list will be configured for that provider.

Donate button

The Donate button will link to Film Efiko's selected external donation platform. Direct payment processing on the website is not included.

Performance, SEO and Website Pages

Very fast performance

The website will be custom-built in Next.js rather than assembled with a heavy public-facing WordPress theme or page builder. This allows the frontend to load only what each page needs.

- Fast cached delivery through Vercel.
- Optimised and correctly sized images.
- Reduced unnecessary scripts and theme code.
- Responsive loading for mobile devices.
- Performance testing before launch.

Automatic SEO management

Editors will manage titles, descriptions and other SEO information from WordPress. The Next.js website will automatically apply the information to each page.

- Search-friendly page titles and descriptions.
- Automatic social-sharing previews.
- Canonical URLs and structured article information.
- XML sitemap and search-engine indexing support.
- Redirects from important existing URLs.
- SEO-friendly category, author, issue and archive pages.

Website pages

Homepage, article pages, category pages, author and columnist pages, issue and cover pages, search, archives, About, Contact, Advertise, Privacy, Terms and other agreed standard pages.

Project Deliverables

DELIVERABLE	INCLUDED WORK
Custom Next.js frontend	Responsive homepage, story, category, author, issue, search and standard information pages.
WordPress publishing	Film Efiko's present WordPress installation remains the editorial backend.
Gadar EasyHeadless publishing solution	Connects the WordPress publishing end to the Next.js frontend and delivers stories, categories, authors, issues and homepage selections.
Audience features	Email-gated articles, newsletter connection and configurable donation calls to action.
Performance and SEO	Fast Next.js delivery, image optimisation, metadata, sitemap, structured information, redirects and analytics.
Deployment	Vercel project setup, production deployment and domain connection.
Content transition	Audit and structured reuse of suitable existing posts, images, authors and categories.
Handover	Editorial training, operating guidance and post-launch defect support.

HOSTING

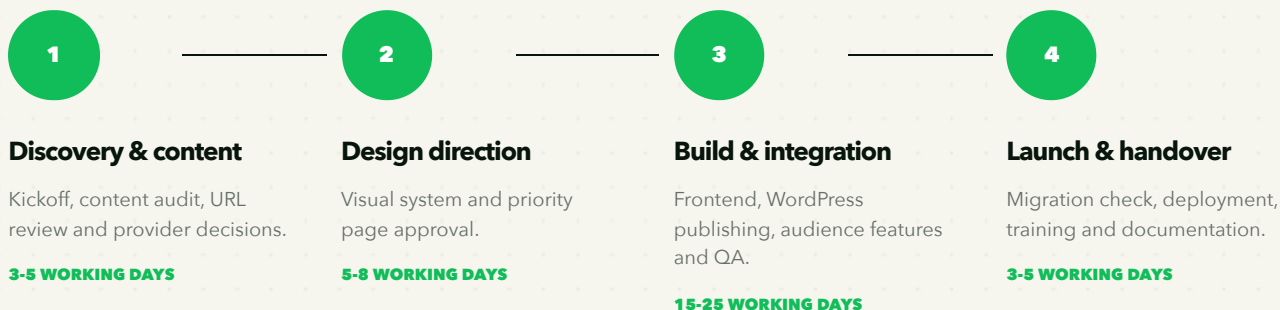

Vercel free plan - ~~£0~~

The free plan is expected to meet Film Efiko's present requirement. Any future paid upgrade or third-party service is billed directly to the client.

CURRENT EXCLUSIONS

Native donation payment processing, paid membership billing, full copywriting, photography, paid media licences and third-party provider fees require separate scoping or direct client payment.

Timeline and Investment

Commercial summary

The professional fee covers planning, custom design, frontend development, Gadar EasyHeadless publishing integration, deployment, training and handover.

Initial invoice

20% commencement payment

₹70,000

Custom website
design &
development

₹350,000

Vercel hosting

₹0

Total investment

₹350,000

Estimated delivery: 5-8 weeks from receipt of the commencement payment and all essential access and content. Client feedback and third-party provider decisions may affect delivery.

Payment Schedule and Project Terms

Payment schedule

STAGE	TRIGGER	AMOUNT
20%	Project commencement	₦70,000
40%	Design and core frontend approval	₦140,000
40%	Before deployment and handover	₦140,000

Hosting: Vercel's free plan is used, so the initial amount due is ₦70,000.

Project terms

- This proposal is valid for 14 days from 25 August 2026.
- The fee includes two structured revision rounds during the design stage.
- Film Efiko will provide accurate copy, images, approvals and access required for delivery.
- Ownership of the completed client-specific website transfers after full payment.
- Gadar retains ownership of EasyHeadless and other reusable tools and frameworks.
- Support covers verified launch defects for 60 days; new features are quoted separately.

Next steps

1. Approve this proposal.
2. Pay the initial invoice.
3. Schedule the kickoff session.
4. Share content, brand assets and provider access.
